General Description

The LT8330 is a current mode DC/DC converter capable of generating either positive or negative output voltages using a single feedback pin. It can be configured as a boost, SEPIC or inverting converter consuming as low as 6 μ A of quiescent current. Low ripple Burst Mode operation maintains high efficiency down to very low output currents while keeping the output ripple below 15mV in a typical application. The internally compensated current mode architecture results in stable operation over a wide range of input and output voltages. Integrated soft-start and frequency foldback functions are included to control inductor current during start-up. The 2MHz operation combined with small package options, enables low cost, area efficient solutions.

Features

3V to 40V Input Voltage Range

Ultralow Quiescent Current and Low Ripple Burst Mode® Operation>

1A, 60V Power Switch

Positive or Negative Output Voltage Programming with a Single Feedback Pin

Fixed 2MHz Switching Frequency

Accurate 1.6V EN/UVLO Pin Threshold

Internal Compensation and Soft-Start

Low Profile (1mm) ThinSOT™ Package

Low Profile (0.75mm) 8-Lead (3mm × 2mm) DFN Package

AEC-Q100 Qualified for Automotive Applications

Application

Industrial and Automotive

Telecom

Medical Diagnostic Equipment

Portable Electronics
