General Description

The P91E0A is a programmable, multi-channel power management IC (PMIC) designed to meet high performance requirements and provide high-feature integration to minimize system board area and BOM cost. The PMIC includes subsystems for voltage regulation, power sequencing management, A/D conversion, GPIOs, PWMs and others. The P91E0A is factory programmable for application specific sequencing and output voltage requirements. The device supports the serial voltage ID (SVID) interface for VCC, VNN and VDDQ (optional). The output current capability of the P91E0A solution can be increased by adding IDT's intelligent distributed power units (DPU).

Features

3.135 V to 5.25 V input voltage range

7 programmable step-down converters of which 5 with integrated Power FETs

Supports the P9148A DPU distributed power unit (DPU)

8 LDOs, including a VTT

SVID interface supporting IMVP8 protocol

10-bit ADC

15 programmable GPIOs and 12 programmable Enable Outputs

Host interface and system power management functions

High-speed I²C interface

Factory programmable default power sequence and settings

Industrial temperature range of -40°C to +85°C

9 x 9 mm dual-row 100-GQFN (Type3-PCB) package option (NHG100)
