General Description

The ATtiny1624 is a microcontroller featuring the AVR® CPU with hardware multiplier - running at up to 20MHz and with 16 KB Flash, 2 KB SRAM and 256 bytes of EEPROM in a 14-pin SOIC package. The family uses the latest Core Independent Peripherals with low power features including Event System, intelligent analog and advanced peripherals.

The new 12-bit ADC offers true differential measuring capabilities with optional hardware accumulation of up to 1024 samples, which effectively gives up to 17-bits resolution. With sampling rates up to 625 ksp/s in accumulation mode and 294 ksp/s in single conversion mode the analog data is available very rapidly. The Programmable Gain Amplifier (PGA) for the ADC can amplify single-ended and differential analog inputs to make it possible to measure even small amplitude signals efficiently.
