## General Description

The S29GL128P90TFIR10 is a high-density, non-volatile flash memory IC designed for data storage and retrieval. It offers a large storage capacity of 128 Mb (16 MB) for various applications.

## Features

High-density storage: 128 Mb (16 MB) capacity

Parallel interface: Supports fast data transfer

Single 2.7V to 3.6V power supply: Provides compatibility with various systems

High-speed operation: Offers fast read and write access times

Erase and program operations: Supports flexible data manipulation

Sector architecture: Allows efficient erasing and programming of data

Low power consumption: Optimized for energy-efficient operation

Extended temperature range: Suitable for a wide range of operating environments

## Application

Embedded systems: Used for firmware storage in microcontrollers, system-on-chip (SoC) devices, and other embedded systems.

Consumer electronics: Found in devices such as set-top boxes, gaming consoles, digital cameras, and printers for data storage and firmware updates.

Networking equipment: Used in routers, switches, and network storage devices for storing firmware, configuration data, and logging information.

Industrial systems: Employed in industrial control systems, automation equipment, and instrumentation devices for program storage and data logging.
